Whitening Agent

Application Temperature(s): N/A

Color: White, free flowing powder

Freeze Thaw Stable: N/A

Min Use Temperature: N/A

Shelf Life: N/A

Solids (~): N/A

Specific Gravity (H₂O = 1): (H₂O = 1) 4 - 5

pH: ~ 6

Characteristics:

Particle Size, % None

This is a pigment blend specifically blended to lighten the color of adhesives.

Applications:

Used in conjunction with adhesives in a variety of wood working applications. Commonly used in veneer splicing applications.

Directions:

Typically the initial amount of agent used with the adhesive is 0.1% based on the weight of the adhesive. Use of more (up to 5.0%) or less Whitening Agent is not a problem and left to the discretion of the customer so that adhesive glue line color can match the wood veneer. Read the MSDS before handling, storing or using this product.

Clean Up and Storage:

Be careful in clean up and disposal as this product is a dye and can cause stains.

This Whitening Agent Powder is a stable material which is not inclined to change provided it is stored in closed containers, in a dry area. Optimum storage conditions are below 75°F and 60% relative humidity.
